

Memo No. 2021-017
Date: 17-Jun-2021
Memo To: Clients
Re: **REVISION: Ultracentrifugation Lipid Panel Update**

Revision: The specimen volume requirements posted to the ICL website have been updated from 2mL serum/plasma, to 6mL preferred and 4.5mL for the minimum volume.

[Lipoprotein Ultracentrifugation, Serum/Plasma](#)

This is a new test listing in the web catalogue. Please note that it is a profile and always includes Apolipoprotein B. Apolipoprotein may be ordered on its own ([Apolipoprotein B, Serum/Plasma](#)).

The Biochemistry division at St Michael's Hospital will be adding non-high-density lipoprotein cholesterol (non-HDL-C) to the ultracentrifugation lipid panel **effective Jun 22, 2021**.

The Non-HDL-C is calculated as total cholesterol minus HDL-C (Non-HDL-C = total cholesterol – HDL-C).
