

IgE Allergen Tests

This list indicates the Whole Allergen and Allergen Components alphabetically with the ICL Test ID.

All tests are performed at Hamilton General Hospital except some at Quest Diagnostics (blue) or Mayo Clinical Laboratories (green). Tests for allergen mixes and panels are segregated to a separate table at the end. For details, refer to individual test listings at <https://iclabs.ca/test-catalogue/> which includes specimen requirements when ordering multiple allergens for an individual.

Allergen Mixes & Allergen Panels

Allergen Mix: A Mix test includes multiple allergens tested collectively (i.e., a single test is performed) – the list of allergens included in the Mix is available online. A negative result indicates that none of the allergens were detected. A positive result indicates that one or more of the allergens were detected but does not identify which allergen or allergens were detected or their quantity.

Allergen Panel Test: A Panel test includes multiple individual tests for multiple specified allergens – the list of allergens included in the Panel is available online. Each allergen is tested separately and included in the report.
