<p>*Compared to CSF concentrations of ABeta42, pTau, and Tau individually, the pTau/ABeta42 ratio has been shown to better correlate with Alzheimer's disease-related pathologic change as measured by amyloid PET scan.</p> <p>*Please note that improper specimen collection or handling technique may falsely decrease ABeta42 and increase the pTau/ABeta42 ratio.</p> <p>*Discrepancies in interpretation of the pTau/ABeta42 ratio compared to CSF concentrations of ABeta42, pTau, and/or Tau individually may relate to improper specimen collection/handling, inter-individual variation in beta-amyloid CSF concentration, a disorder related to CSF dynamics, and/or elevation in pTau due to a non-Alzheimer's disease-related pathologic change.</p> <p>*Clinical correlation is required. For patients with values near cutoffs, interpretation in the context of clinical history is particularly important.</p>
